User Access Guide

A complete reference for Principals & Administrators — detailing what each role can see, what they cannot, and why that matters.

14 roles · 32 features · 3 layers of security

The system defines **14 distinct user roles**. Each role is granted access only to what it needs for its duties — a design decision rooted in staff privacy, student safety, and financial integrity. The admin sidebar exposes **32 features** in total; roles see a curated subset of these.

Three layers of system security

Layer 01

Database layer

PostgreSQL Row-Level Security — even bypassing the API cannot leak data.

Layer 02

Server layer

Every action passes through a `requirePermission()` check.

Layer 03

UI layer

Buttons and links are hidden from users who do not have permission to use them.

✓ Result: An accountant can never view or change exam marks — even by manipulating the URL.
