Part 01 · 2 features

Getting Started — Own your mornings

Every morning begins with the same question: "What's happening today?" The Dashboard answers it in 30 seconds. Admission Inquiry turns every unanswered phone call into a tracked, warm lead.

2 features

01

Dashboard · Live Overview

Walk in, see everything that matters in 30 seconds.

⚠️ THE PROBLEM

Every morning you need to know — **how many students are present? How much did we collect this month? Which classes are falling behind?** Each answer lives in a different register, under a different clerk. A 10-minute decision takes 30 minutes of chasing.

✅ THE SOLUTION

The moment you sign in, a live portrait of your institution appears — total students, today's attendance %, this month's income, pending fees — on one screen. **AI alerts** surface issues before they become crises: long absences, classes with falling collection.

muhiussunnah.app/admin

Welcome, Mustaqeem

Sunday, 19 April 2026 · 2 Dhul Qi'dah 1447 AH

TOTAL STUDENTS	ATTENDANCE	INCOME MTD	PENDING FEE
1,247	94%	৳8.5L	৳1.2L

🤖 **AI Alert** — 3 students absent for 5+ days

💰 **Today's collection** — 84 receipts · ৳25,400

1. **Sign in** — the system routes you straight to the Dashboard.
2. **Four metric cards** surface the KPIs you care about. Arrows indicate trend.
3. **AI alerts** — click through to the flagged students or classes.
4. **Quick CTAs** below — first-student and first-class setup shortcuts for day one.

⏱ **30 sec** — daily snapshot 🎯 **4** live KPIs 🧠 AI alerts, hands-free

02

Admission Inquiry · Lead Tracking

Turn lost leads into enrolled students.

⚠️ THE PROBLEM

All year, parents call, walk in, ask about admission. Their phone number, child's class, when they visited — all scribbled in a notebook that inevitably gets lost. **Follow-ups never happen.** Hundreds of potential students go to competitors because nobody called them back.

✅ THE SOLUTION

Each inquiry flows through a 6-stage pipeline: **New** → **Contacted** → **Visited** → **Form filled** → **Enrolled** → **Lost**. Notes, reminders, automatic SMS. A single click surfaces the leads you haven't contacted yet.

admin/admission-inquiry

Active Inquiries · 24

+ New Inquiry

Tahsin Ahmed · Class 6	Contacted
Maryam Khatun · Class 3	Visited
Sakib Hasan · Nursery	Enrolled
Abdullah · Hifz	New

1. Open **Admission Inquiry** from the sidebar.
2. Click **+ New Inquiry** — parent name, phone, expected class, source (Facebook / referral / walk-in).
3. Weekly, filter **"New"** and follow up via WhatsApp / call.
4. When a student enrolls, move the card to **"Enrolled"** — a student record is created automatically.

💡 **Pro tip:** Spend 10 minutes each morning on the "New" tab. Within a month, most institutions see 20–30% higher admissions.

Part 02 · 4 features

Academic Foundation — The backbone of your institution

Students, staff, classes, and academic years. Without these four, nothing else works. Get them right on day one and the other 28 features flow automatically.

4 features

03

Students · Master Database

One search box, every student's full history.

⚠️ THE PROBLEM

You need a student's father's phone — hunt through the admission register. You need their last year's result — a different notebook. You need their fee ledger — the accountant's book. Each student's data is scattered across 5–10 separate places.

✅ THE SOLUTION

One master profile per student: photo, guardians, address, health info, admission date, transfer history, term-by-term result timeline, fee ledger, attendance pattern, Hifz progress, behavior notes — everything. Search by name, roll, or phone and the answer is 2 seconds away.

admin/students

🔍 Search by name, roll, or phone...

+ Admit | ⬇ Excel Import

Sakib Hasan · Roll 12 · Class 7A	Fee: ✅ · Attn: 98%
Tamim Iqbal · Roll 08 · Class 5B	Fee: ⚠️ ৳2,000 · Attn: 85%
Maria Jahan · Roll 23 · Class 9A	Fee: ✅ · Attn: 100%

1. **First setup:** Click "Excel Import", download the template, fill it, upload — 100+ students in under a minute.
2. **New admission:** "+ Admit" → photo, guardians, EIIN, birth certificate — all in a single form.
3. **Click any student** to open their full profile — attendance, result, fee, Hifz, notes.
4. **Transfer / TC:** change status → the certificate generates automatically.

⏱ **2 sec** search 📂 **12** profile tabs 📤 Excel import supported

04

Staff · HR Management

From day-one joining to annual bonus, in one record.

⚠️ THE PROBLEM

Who joined when? Where is the NID scan? Who teaches which class? What is the pay scale? Every answer sits in a different file. When one teacher takes leave you scramble to find a substitute.

✅ THE SOLUTION

One staff profile holds joining date, pay scale, NID, academic certificates, assigned classes and subjects, contact, emergency person, leave balance. The system computes salary, tracks leaves, and measures performance automatically.

admin/staff

Staff & Teachers · 47 active

👩‍🏫 Maulana Abdullah · Class Teacher	Class 6A · ৳25,000/mo
👩‍🏫 Umm-e Habiba · Subject Teacher	English · ৳22,000/mo
👨‍💼 Rahim Uddin · Accountant	Finance · ৳18,000/mo
👷 Akbar Ali · Peon	Support · ৳8,000/mo

1. **Add staff:** full name, phone, NID, designation, pay scale, joining date — one form.
2. **Assign role:** CLASS_TEACHER / SUBJECT_TEACHER / ACCOUNTANT / LIBRARIAN — the role decides which dashboard they land on.
3. **Link classes and subjects:** "English — Class 7A, 7B" — this teacher can now enter marks for those classes only.
4. **Leave management:** application, approval, balance — automatic.

05

Classes, Sections, Subjects · Structure

Define once, the rest of the system configures itself.

⚠️ THE PROBLEM

Class 6 has 4 sections. Each section has 12 subjects. Each subject has its own pass mark. Each section has its own class teacher. Rebuilding this map every year by memory is error-prone and exhausting.

✅ THE SOLUTION

Declare it once: classes (Nursery → Class 10 / Hifz / Kitab), sections (A, B, C...), subjects (Bangla, English, Math, Islamiyāt...), subject-teacher assignments. Every downstream feature — exams, attendance, marks — obeys this structure automatically.

admin/classes

Class Structure

📚 Class 6 (3 sections)	A: 35 · B: 32 · C: 30 · 12 subjects
📚 Class 7 (3 sections)	A: 38 · B: 34 · C: 29 · 12 subjects
📖 Hifz Level 1	15 students · 30 juz target
📖 Kitab Year 1	20 students · 8 kitab

1. **Class:** "+ New Class" → name, GPA scale.
2. **Section:** Class 6 → "+ Section" → A / B / C.
3. **Subject:** Class 6 → "+ Subject" → each with full mark + pass mark.
4. **Teacher-subject link:** "Class 6A — Bangla" → pick the teacher.

🕌 **Madrasa-ready:** Hifz levels and Kitab stages come pre-configured — Juz 1-30 and Kitab Stages 1-8 work out of the box.

06

Academic Years · Annual Containers

Year-end rollover without losing a single record.

⚠️ THE PROBLEM

2025 ends. The new session begins in 2026. Where do 2025's attendance records, results, and fee history go? Erasing registers to reuse them is how history disappears.

✅ THE SOLUTION

Each year is a self-contained container. Switching the active year starts the new session. The old year moves to archive mode — fully browsable, permanently read-only. Pull any old transcript on demand.

1. **Create a new year:** "2026" · start 1 Jan · end 31 Dec.
2. **Set Active:** all new attendance, marks, and fees belong to this year.
3. **Student promotion:** one click moves all of Class 6 into Class 7. Old records stay intact.
4. **Archive:** prior years remain viewable but cannot be edited.

Part 03 · 5 features

Teaching & Assessment

From daily attendance to the certificate on graduation day — the academic heartbeat of your institution.

5 features

07

Attendance · Digital Hazira

The paper register is obsolete.

⚠️ THE PROBLEM

Paper registers, per-class notebooks, tick marks nobody can decipher at month end. **Three-day absences go unnoticed** until exam-day failure forces a conversation.

✅ THE SOLUTION

A teacher taps through the class list on their phone in seconds. Missing students trigger an **instant SMS to the guardian**. Monthly reports print in one click.

admin/attendance

Today's Hazira · Class 7A · 35 students

Sakib Hasan (Roll 1)	Present
Tamim (Roll 2)	Late
Maria (Roll 3)	Absent
✓ 33 present · 1 late · 1 absent	94% attendance

1. **Teacher:** open Teacher dashboard → "Today's hazira" → select class → swipe through present/late/absent.
2. The moment a student is marked absent, an SMS goes to the guardian: "Your child is not in school today."
3. **Principal:** live attendance % on the Dashboard; classes below 85% flash red.
4. **Monthly:** one-click student-wise attendance report (PDF).

⏱ **10 sec** per class 📱 Instant guardian SMS 📊 Auto monthly report

08

Exams & Results · Tabulation on Autopilot

No more tabulation all-nighters.

⚠️ THE PROBLEM

Five teachers deliver marksheets. The tabulator transfers them by hand. A week of late nights, Bangla Unicode glitches, grade-calculation errors. Disputes from parents over wrong positions.

✅ THE SOLUTION

Teachers enter marks in a keyboard-friendly grid. The system computes **totals, percentages, grades, positions, and GPA**. Bilingual printable marksheets in two clicks.

1. **Create exam:** "Midterm 2026" → start/end date → subjects.
2. **Schedule:** which day, which subject. Admit cards generate automatically.
3. **Marks entry:** subject teachers sign in → grid view → type fast. "Lock" → principal approves.
4. **Publish:** one click → visible in every student's portal, SMS notification to guardians.

🎓 **GPA 5.0** by default, or switch to percentage or a custom rubric. Marksheets mirror Bangladesh's board format.

09

Assignments · Homework

Homework pages never go missing again.

⚠️ THE PROBLEM

A teacher announces homework in class. Students forget or skip writing it in the diary. When a student fails the assignment, who's at fault? During remote learning, this problem multiplies by ten.

✅ THE SOLUTION

Teachers send a digital assignment — title, description, attachment, submission date. Students and parents receive portal notifications. Reminders go out as the due date approaches. Teachers grade submissions directly.

1. **Teacher:** "+ New Assignment" → title, file upload, due date.
2. **Student:** notification in portal → upload answer (photo / PDF) or in-app text.
3. **Teacher:** submissions list → grade + feedback.
4. **Overdue:** system automatically SMSes the guardian.

10

Online Classes · Live & Recorded

Zoom / Meet links, in one place.

⚠️ THE PROBLEM

During COVID or floods, classes move online. Every day a new Zoom link goes out on WhatsApp — some get it, some don't. Attendance is untrackable.

✅ THE SOLUTION

The teacher schedules "Class 7A — Math — 10am — Meet link". It appears in every student's portal. Joining automatically marks attendance. The recording is saved for later viewing.

11

Certificates · Transfer, Character, Study

From request to PDF in a minute.

⚠️ THE PROBLEM

A parent requests a Transfer Certificate. Printing, signatures, the school seal — two days of back-and-forth. Character and Study certificates each involve a separate workflow.

✅ THE SOLUTION

Pre-made templates — TC, Character, Study, Transcript, Testimonial. Pick student → click → PDF ready with signature, seal, and QR verification. One minute of work.

1. Open the student's profile → **"Issue Certificate"**.
2. Choose a template — TC / Character / Study / Transcript.
3. Auto-fill: name, class, dates, principal's signature, school seal.
4. A **QR code** is embedded so other institutions can verify authenticity.

Part 04 · 7 features

Financial Management

Money in, money out, payroll, scholarships, donations, investments — the circulatory system of your institution.

7 features

12

Fees · Invoicing & Collection

From invoice generation to bKash / Nagad / card.

⚠️ THE PROBLEM

Every student has a slightly different fee structure (waivers, scholarships, transport add-ons). Monthly invoice generation, verifying bKash / Nagad receipts, chasing late payers — a week's worth of clerical work for 1,000 students.

✅ THE SOLUTION

Thirty **pre-configured fee heads** (Tuition, Exam fee, Transport, Hostel...). Per-student fee plans auto-generate. **bKash, Nagad, SSLCommerz** gateways connected — parents pay from the portal, receipts are automatic.

admin/fees

This Month's Fee Status

COLLECTED	PENDING	OVERDUE	TARGET
৳12.4L	৳1.2L	৳45k	৳15L

Sakib Hasan · April Tuition — ✓ ৳3,000 · bKash

Tamim · April Tuition — Due ৳3,000

1. **Fee heads:** Tuition, Exam, Transport — amounts configurable per class.
2. **Auto invoice:** 1st of every month, for every student, in one batch.
3. **Reminders:** automatic SMS / email as soon as a due date passes.
4. **Parents pay:** from the portal via bKash / Nagad / Rocket — receipt instant.
5. **Partial payments and discounts** supported first-class.

💳 **4** payment gateways 📊 Live collection % 🎯 Auto reminders

13

Payments · Receipt Ledger

Every rupee has a signed, auditable receipt.

⚠️ THE PROBLEM

A parent says "I paid ৳3,000 last month." Twenty minutes of register-searching. It's there — or it isn't. Cash came in but the accountant forgot to issue a receipt.

✅ THE SOLUTION

Every payment — cash, bank, bKash, Nagad — on one timeline. QR-coded receipts. Every historical payment visible inside each student's portal. If the accountant skips an entry, the principal sees the gap instantly.

14

Expenses · Category Tracking

Know where the money actually goes.

⚠️ THE PROBLEM

Electricity bills, book purchases, repairs, food — everything lumped into one "expense book". At month-end you can't see where the overruns are. No budget discipline.

✅ THE SOLUTION

Twenty-four **pre-configured expense heads** — Utility, Stationery, Food, Repair, Salary, Tax... Attach a receipt to every entry. A monthly pie chart reveals exactly which category is growing.

15

Donations · Campaign Ledger

Every donor deserves a transparent answer.

⚠️ THE PROBLEM

Someone donates ৳10,000. Six months later they ask "Where did my money go?" If you can't answer clearly, you won't receive another donation.

✅ THE SOLUTION

Each **donation campaign** (masjid construction, Eid gifts, scholarship fund) is a separate ledger. Donor name, phone, amount, and how the money was used — all tracked. Donors receive automatic quarterly reports.

16

Investments · Institutional Assets

Watch over the institution's long-term holdings.

⚠ THE PROBLEM

The institution owns land, rents out shops, holds FDRs. Lease dates, rent renewals, monthly returns — no human memory holds all of it accurately.

✅ THE SOLUTION

Each asset (land, shop, FDR) gets its own record. Lease-renewal alerts fire 30 days in advance. Monthly returns auto-flow into this month's income.

17

Payroll · Salary

45 teachers' salaries — 5 minutes.

⚠ THE PROBLEM

Month-end: basic, allowances, overtime, tax, absent-deductions, advances — each teacher is a different calculation. Two days for the accountant, and any mistake makes a teacher unhappy.

✅ THE SOLUTION

Set the pay scale once. On the 1st of every month the system **auto-computes** salary, allowances, and deductions. Export a bank file. Principal approves, transfers go out via bKash or bank.

18

Scholarships · Merit & Need

Rewarding brilliance, sustaining opportunity.

⚠ THE PROBLEM

One student gets a 50% waiver, another 100%, a third a special-case grant. Applying these discounts correctly on every invoice is error-prone. Mistakes trigger parent complaints.

✅ THE SOLUTION

Each scholarship — merit-based or need-based — is defined once and linked to a student. Fee invoices apply the discount automatically. Transparent, auditable reporting.

Part 05 · 7 features

Daily Operations

Notices, messaging, library, transport, hostel, inventory, support — the institution's nervous system.

7 features

19

Notices · Announcements

The paper notice board is dead.

⚠ THE PROBLEM

"Tomorrow is a holiday" — not every parent hears this in time. Paper notes get lost in backpacks. WhatsApp groups leave non-members out.

✅ THE SOLUTION

Publish once. It appears in every student's and parent's portal. Opt in and SMS goes out too. Read receipts tell you who saw it. Target a specific class (Class 9 only, Hifz only).

20

Messaging Reports · SMS & WhatsApp

See where your SMS budget really goes.

⚠ THE PROBLEM

50–100 SMS a day (absence alerts, due reminders, exam notices). Monthly SMS bill: ৳10,000. Which template is overused? Where's the waste? Nobody knows.

✅ THE SOLUTION

Every SMS / WhatsApp is logged — time, recipient, template, delivery status. An **AI template generator** turns a short prompt into a natural-sounding message. Top up credit online.

21

Library · Books & Readers

Lost books billed, avid readers rewarded.

⚠ THE PROBLEM

The librarian scribbles in a register. Six months later, nobody knows how many books are missing or who the top readers are.

✅ THE SOLUTION

Book catalog (ISBN search auto-fills), barcode / QR issue and return, automatic due dates, overdue fines, a monthly reading leaderboard.

22

Transport · Bus & Routes

Real-time confirmation = parental peace of mind.

⚠ THE PROBLEM

Did my child board the morning bus? Why is the afternoon bus late? Parents call the office every day for answers.

✅ THE SOLUTION

Routes, stops, rider lists. When the driver taps "pickup confirmed" on their phone, the parent instantly receives an SMS. Transport fees auto-invoice.

23

Hostel · Residential Life

Full life-cycle management for residential students.

⚠️ THE PROBLEM

100 residential students in 25 rooms. Who is in which room? Who ate lunch? Who is on leave? All of it lives in the warden's head — and when the warden is away, the system breaks.

✅ THE SOLUTION

Room allocation grid, meal attendance (breakfast / lunch / dinner), leave forms with parental approval, hostel fee tracking — all on one screen.

24

Inventory · Stock & Assets

Know what you own, before you need it.

⚠️ THE PROBLEM

Class starts. "We're out of chalk." "The textbooks are finished." How many chairs do we have? Are any broken? Nobody knows.

✅ THE SOLUTION

Every item logged — quantity, location, purchase date, condition. Low-stock alerts. Breakage records. An annual audit report at one click.

25

Support Tickets · Parent Concerns

Complaints, organized.

⚠️ THE PROBLEM

A parent calls: "My bill has an error." Who takes it? When is it resolved? Was there a follow-up? No trail exists.

✅ THE SOLUTION

Parents raise a ticket from the portal. Assigned to specific staff. Status tracked (open → in progress → resolved). Response-time reporting.

Part 06 · 3 features

Madrasa-Specific Modules

Dedicated to religious education — Hifz, Kitab, Sabaq. Bangladesh's first and only comprehensive Islamic-education tracking system.

3 features

26

Hifz Tracking · Qur'an Memorization

30 juz — every student's digital diary.

⚠️ THE PROBLEM

The ustadh writes daily: "Student X — Juz 5, page 12, line 8." Six months later, the diary is full. Old progress becomes hard to retrieve. Parents asking for an update get vague answers.

✅ THE SOLUTION

A visual timeline of each student's Hifz journey — surah, juz, pages, start date, end date. **Sabaq / Sabqi / Manzil** tracked separately. Parents see live progress from the portal.

27

Kitab Progress · Dars-e-Nizami

Eight-year journey, stage by stage.

⚠️ THE PROBLEM

Dars-e-Nizami spans 8 years. Each year has specific kitab. Which ones has a student completed? Which are pending? Long, error-prone registers.

✅ THE SOLUTION

Pre-configured Dars-e-Nizami curriculum — Mishkat, Bukhari, Muslim, Abu Dawud, Mufkin... Each kitab shows completion %, and the exact date of completion.

28

Daily Sabaq · Lesson Tracking

Today's lesson, tomorrow's revision.

⚠️ THE PROBLEM

The madrasa concept of "sabaq" is unique: new content every day, "sabqi" revision the next day, "manzil" weekly revision. Without tracking this cycle, students fall behind quietly.

✅ THE SOLUTION

Daily sabaq entry — lesson, quality (excellent / good / weak), ustadh's remarks. A 7-day chart shows the trend. Weak scores trigger guardian alerts.

Part 07 · 4 features

Insight & Security

Reports, AI, Audit — three "eyes" that watch the institution even when yours are closed.

4 features

29

Reports · Pre-built

Seven printable reports, one click each.

⚠️ THE PROBLEM

Monthly board report. Donor fund-use report. Government enrollment data. Each takes the accountant a week of compiling.

✅ THE SOLUTION

Seven pre-built reports: Fee Collection, Attendance Summary, Income-Expense, Dues Aging, Student Enrollment, Payroll Summary, Expense Category. All export to PDF or Excel.

30

AI Risk Analysis · Dropout Prevention

AI tells you who's about to drop out — early.

⚠️ THE PROBLEM

Every year 5–10% of students disappear mid-session. Parents rarely say anything. You find out when it's too late to do anything.

✅ THE SOLUTION

AI analyzes each student's pattern (attendance ↓, marks ↓, late fees, missing assignments, paused Hifz) and assigns a "risk score". High-risk students are automatically flagged — counselors reach out proactively.

🧠 **Data-driven:** Not just attendance — marks trends, sabaq quality, guardian payment patterns, assignment submission rates — every signal combined.

31

Audit Log · Activity Trail

Who did what — signed, timestamped, unchangeable.

⚠️ THE PROBLEM

Someone changed a student's marks. Someone voided a receipt. But who? When? No proof.

✅ THE SOLUTION

Every critical action — create, update, delete — is logged with timestamp, IP, and user. Nobody can alter the log after the fact. Tamper-proof accountability.

Settings · Institution DNA

Configure once, every document carries your identity.

⚠️ THE PROBLEM

Every institution has its own logo, seal, name (in multiple languages), EIIN, address, session pattern, grading rubric. Retyping these everywhere is painful.

✅ THE SOLUTION

Configure once in Settings — certificates, reports, invoices, marksheets all pick up your branding automatically. Enable **2FA** on the principal account for extra security.

Epilogue

This software is equal to a full-time assistant.

The work of a ৳25,000-a-month assistant, at 90% less cost — but with far greater accuracy and speed.

🌟 First-Week Checklist

1. **Day 1:** Settings → institution info, logo, EIIN. Activate the current academic year.
2. **Day 2:** Define classes, sections, subjects. Assign subject teachers.
3. **Day 3:** Add staff one-by-one (or Excel import).
4. **Day 4:** Students — Excel import (100+ students in a minute).
5. **Day 5:** Verify fee heads and generate the first batch of invoices. Connect payment gateways (bKash / Nagad).
6. **Day 6:** One-hour training for teachers — mobile attendance + marks entry.
7. **Day 7:** Share portal links with parents. Publish the first notice.
